

# Managed Project Service (MPS)

## Control. Accountability. Delivery.

**Saros Managed Project Service (MPS) is a delivery model where we take full accountability for outcomes, not just provide resources.**

**We own delivery from initiation through to completion, including leadership, execution, governance, and reporting. Clients do not manage individuals, coordinate vendors, or carry delivery risk. Saros does.**

**MPS replaces traditional resource-led delivery models with a single accountable service that ensures initiatives are realistic, properly governed, and delivered with confidence at executive level.**

### What Successful Delivery Requires

Successful delivery does not happen by accident. It is the result of clear structures put in place before complexity takes hold.

The organisations that consistently deliver share the same foundations:

- A single owner of outcomes with the authority to make decisions
- Governance that provides visibility and control without slowing momentum
- Planning grounded in reality rather than optimism

- Risks surfaced and addressed early, before they become costly

MPS is built around these foundations from day one.

### What MPS Delivers

#### SINGLE POINT OF ACCOUNTABILITY

One party owns delivery outcomes end-to-end. No ambiguity, no shared responsibility.

#### END-TO-END DELIVERY OWNERSHIP

Full control of scope, schedule, cost, risks, issues, and dependencies.

You have a clear, reliable view of delivery at all times.

## INTEGRATED GOVERNANCE

Governance that provides control and visibility without slowing delivery.

Executive-ready reporting from day one.

## VENDOR & STAKEHOLDER COORDINATION

Saros manages internal teams, vendors, and third parties.

You are not coordinating delivery across multiple parties.

## INDEPENDENT CHALLENGE

We have an explicit responsibility to challenge decisions that increase delivery risk.

Risks are surfaced early, not after impact.

## SCALABLE DELIVERY MODEL

Consistent delivery across projects, programmes, and portfolios.

The model scales without increasing complexity.

## How the Service Works

- Engage at any stage: initiation, mid-delivery, or recovery
- Stabilise and reset where delivery is off track
- Take full ownership through to completion

**Where complexity is high, Saros applies structured discovery and assessment to validate feasibility before further investment.**

### Governance and Assurance Quality Audits

Saros audits the quality of delivery across every engagement, continuously reviewing performance, decisions, and outcomes to ensure a consistent, high standard is maintained. This way, quality is actively governed, measured, and enforced.

## Service-Level Resourcing

MPS operates as a service, not a collection of individuals.

- Capacity flexes based on delivery need
- Senior expertise is applied where it adds the most value
- Delivery continuity is maintained regardless of personnel changes

Delivery does not depend on individuals. It is built into the service.

## Global Delivery Model

MPS is delivered through a consistent global operating model.

- Single point accountability retained by Saros
- Onshore leadership and executive engagement
- Consistent governance and reporting standards
- Service-level resourcing across locations

**Geography does not change accountability or delivery standards.**

## Commercial Model

MPS can be delivered under fixed-price or time-and-materials structures.

These are payment mechanisms only.

They do not change delivery accountability.

Scope, assumptions, and change control are clearly defined so delivery remains controlled and transparent.

Accountability is not a commercial variable. It is built into every engagement.

**Accountability is not a commercial variable. It is built into every MPS engagement by design.**

## Delivery Model Comparison

Area	Traditional Models	Saros MPS
Accountability	Shared or unclear	Single accountable owner
Speed	Slow to mobilise	Rapid mobilisation
Scalability	Headcount-driven	Scales across initiatives
Continuity	Dependent on individuals	Built-in continuity
Cost predictability	Variable	Outcome-based forecasting
Risk ownership	Retained by client	Actively managed by Saros

## What Success Looks Like Within 90 Days

### DELIVERY CLARITY

One version of the truth. Not multiple conflicting status reports.

### DEFINED OWNERSHIP

A single accountable party for outcomes. No ambiguity when decisions matter.

### TRANSPARENT REPORTING

Executive-ready visibility from day one, suitable for board and audit scrutiny.

### ESTABLISHED GOVERNANCE

A proportionate governance structure in place and actively managing delivery.

## What MPS Is Not

This matters because many services look similar but operate differently:

- Not staff augmentation
- Not contractor substitution
- Not a bureaucratic PMO
- Not advisory-only

**MPS is a managed delivery service accountable for outcomes.**

## Why This Works When Others Don't

- Traditional models provide people. MPS provides accountability.
- Advisory models recommend. MPS delivers.
- Resource models scale headcount. MPS scales outcomes.

## The Saros Way

MPS integrates strategy, governance, and delivery into a single service:

## Start Delivering with Certainty

*Engage Saros to restore control, accountability and confidence in delivery.*
